# Calico - Mass Spectrometers

South San Francisco, California

Image credit: Camera

Calico is a research and development company who is dedicated to understanding the science of aging and developing therapeutics to address age-related diseases.

The scope of this project was to perform mechanical, plumbing, structural, and electrical engineering for room E162 in the Calico office in South San Francisco. This included design of temperature control and mass spectrometer infrastructure for room E162. Plumbing work included sizing and planning of all plumbing utilities. Electrical power and lighting equipment was also included. Roof and floor plans were created and coordinated with other engineering trades to ensure the integrity of the installation.
